A satnav conveniently integrated with your delivery schedule all on the same handset

Now there is no need for drivers to have separate devices with the Vigo truck-based integrated Satnav. It works seamlessly with Vigo Mobilise to provide delivery schedules, ePODs and route guidance all on one handset.

Unlike traditional satnav solutions we have removed the need to manually enter each address. The delivery schedule, including addresses and contact details, are automatically loaded to the Satnav from the mobile workforce app.

Routes are optimised for trucks to always use the fastest option and take into account live traffic updates, low bridges and narrow or weight restricted access*.

The app can be easily loaded on all your existing Android devices and activated immediately. Maps are pre-loaded so navigation can be used with no data connection and reduce mobile data usage.

Based on our low monthly subscription per device the first year cost is on average 80% cheaper than buying a standalone satnav device.
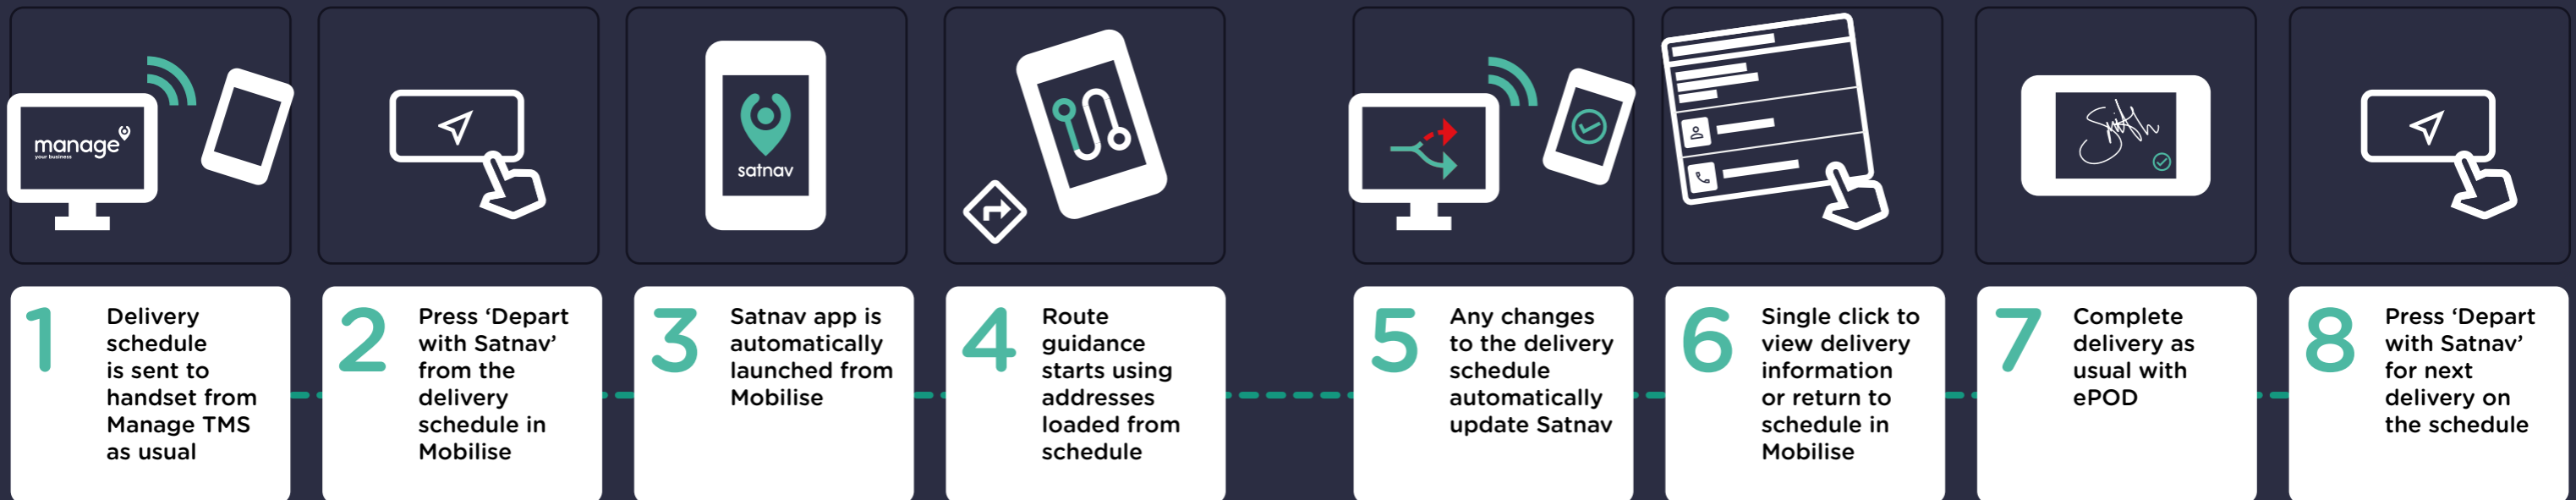

Key Features:

- Seamless integration with Mobilise
- One button launch from mobile workforce app
- Simplifies delivery process for your drivers & agency drivers
- Uses truck and commercial based routing
- Routing takes into account vehicle attributes (height, weight etc.)*
- Maps pre-loaded to reduce mobile data usage or in case of loss of mobile data connection
- Map view or turn-by-turn navigation option
- Navigation takes into account live traffic updates
- Option to turn navigation voice on/off

- Delivery contact details uploaded to Satnav for easy call management
- Satnav shows ETA's
- Regular map updates included in monthly fee
- Seamless single click switch between Satnav and delivery schedule screens
- Schedule updates are automatically uploaded to satnav
- Customer ETA is updated after re-routing in Satnav
- Familiar and intuitive satnav interface
- Loads on to existing device so no need for extra hardware
- Simple low-cost monthly charge per handset

* Subject to correct vehicle data being entered on the device and TMS. Images are for illustration purposes only & are subject to change.

So how does it work?

It's really simple to use and it all happens on one device:

1 Delivery schedule is sent to handset from Manage TMS as usual

2 Press 'Depart with Satnav' from the delivery schedule in Mobilise

3 Satnav app is automatically launched from Mobilise

4 Route guidance starts using addresses loaded from schedule

5 Any changes to the delivery schedule automatically update Satnav

6 Single click to view delivery information or return to schedule in Mobilise

7 Complete delivery as usual with ePOD

8 Press 'Depart with Satnav' for next delivery on the schedule
