

Cross Dock

Load the right goods, to
the right vehicle, every time.

Lost pallets, missed pallets, wrong loads, and constant delivery queries cost your business time and money. Vigo's Cross Dock software gives you complete visibility and control across inbound, hub, and outbound operations, so nothing gets missed.

**One platform. Every scan, every pallet, every handoff
- tracked in real time.**

Inbound: Smooth Handling From the Start

Define lanes, scan products, and place every item in the correct dock location
- accurately, every time.

Intermediate Hub: Smart Storage

Items stored in intermediate areas are assigned a tracked location in the system
- so your team always knows exactly what's waiting and where.

Outbound: Fast, Accurate Loading

Scanning guidance keeps loading fast and accurate - no delays, no costly mistakes.

Key Features

Still running manual loading and unloading processes? Vigo replaces the chaos with:

Full inbound and outbound demand visibility at order and item level

Multi-operator scanning, unlimited schedules and jobs processed simultaneously

Enquiry function for fast order and pallet identification

Photos and discrepancies linked directly to order management

Complete Traceability. Every Pallet. Every Time

Small mistakes in cross docking quickly become costly delays.

Vigo keeps you in control:

Automatic TMS Updates | Every scan updates in real time - fewer calls, fewer trips to the shop floor.

Digital Loading and Unloading Lists | Paper-free and efficient.

Full Supply Chain Visibility | Track inventory and shipments across your entire operation.

Fewer lost pallets

Reduced loading errors

Real-time visibility

Lower handling costs
